- Optimize the code quality by implementing best practices.
- Conducted software analysis, programming, testing & debugging.
- Troubleshoot and resolved the reported issues and replied to queries on time.
- Prepared and produced release of software components.
- Recommended changes to improve java application processes.

Project Experiences:

1) Project: I had done the project "Voice Desktop Assistant" using *Artificial Intelligence* in Python.

My project topic is "Voice Desktop Assistant". It is somehow similar to Google assistant, Siri. It is basically taking our voice as input and perform the given command. It helps the user to perform basic operations on their computer such as; opening programs, checking the time, checking the disk space, checking the battery status, and even sending e-mail, all via voice command.

2) **Project: I had made "Real Estate Price Prediction" using *Machine Learning***

Price prediction uses an algorithm to analyze a product or service based on its characteristics, size, and location. Then the software sets a price at a level, its prediction will attract both customers and maximize sales. In some circles, the practice is called price forecasting.

Certification:

- Certified Java Developer by Udemy.
- Have done Python Certification from Udemy.
- Machine learning using python Certification by Coursera.
